POST IV CONTRAST INSTRUCTIONS

IV contrast was given to you to improve the quality of your CT scan.

1. Drink 6-8 glasses of fluids over the next 24 hours to help your body wash out this contrast.
2. If your injection site becomes red, swollen or warm to the touch or you have any new or unusual problems, you should return to the emergency room immediately. Bring these instructions with you if possible.

Read the above instructions carefully, if you do not understand them, ask questions before you leave CT department.
